Continuation Sheet (PTO-303)

Application No. 10/043,981

Continuation of 3. NOTE: It is noted that a number of documents that may be material to the patentability of the claims have not been submitted to the Office. Including, but not limiting to, the incorporated references and a search report corresponding to (WO/2002/056145) titled "CIRCUIT SIMULATION". It appears that the WO specification and claims correspond to the Specification and Claims of the Instant Application. Therefore, the search report is material to the examination of the claims.

Furthermore, Applicants have not submitted for consideration a Dissertation of one of the Inventors. The Dissertation is titled "A state selection algorithm for the automated state model generator", authored by Juri Jatskevich, and dated 1999. The Dissertation appears to be material to the patentability of the Instant Application because at least chapters 3, 4, and 6, are directed to what appears to be the same subject matter the Applicants disclose and claim. Clarification is requested.

Additionally, Figure 1 should be labeled as --Prior Art-- because only that which is old is disclosed (see Fig 1.2 of the Dissertation). The descriptions of some of the Figures of the Instant Applicants appear to be drawn to the same subject matter as the descriptions in the Dissertation. Applicants are respectfully requested to carefully review the Dissertation for other figures and accordingly label them as -- Prior Art-- in the Instant Application's Drawings.

Furthermore, Applicants are requested to supply any other documents by any of the inventors (including the Dissertation, and the references relied thereupon). Applicants are reminded of their duty to disclose.

The Examiner attempted to obtain the documents but was only able to view the first 24 pages on http://wwwlib.umi.com/dissertations/fullcit/3018454.

Also, it is noted that Figure 11 should be labeled as prior-art because it shows only that which is old.
